Part I – General Information

In accordance with Section 56-5-1350 of the South Carolina Code of Laws, a tabulation and analysis of collision reports has been completed for the year 2012 as disclosed in this publication.

The number of traffic fatalities increased from 828 in 2011 to 863 in 2012, a 4.2% increase. There was also an increase in the mileage death rate (MDR) as well. It increased to 1.76 deaths per hundred million vehicle miles of travel from 1.70 in 2011.

Traffic fatalities are the most severe consequence of motor vehicle collisions, but even in non-fatal collisions, the cost in human suffering can be severe. There were 50,064 reported traffic injuries in 2012, up 8.7% from 2011.

Traffic collisions are responsible for billions of dollars in economic loss to South Carolina each year. Economic loss as estimated in this publication includes property damage, medical costs and lost productivity, but does not include intangible costs such as grief and suffering. In 2012, \$2.87 billion dollars in estimated loss was incurred which is a 5.7% increase from 2011.

What is responsible for the tragedy of motor vehicle collisions and what strategies should concerned individuals employ in the reduction of collisions in the future? On the following pages, statistics are presented which describe the characteristics, causes and effects of traffic collisions in South Carolina. It is hoped that this information will be useful to all persons interested in fostering a safer operating environment for motorists in South Carolina.

All collision statistics included in this publication are based on the Uniform Traffic Collision Report Forms (TR-310) received from investigating officers. By law, any collision that results in at least \$1,000 in total property damage, or results in injury or death and occurs on a public highway must be reported to the South Carolina Department of Public Safety on the appropriate form. If these collisions occur on private property or are reported on any form other than the TR-310, they are excluded.

The statistics contained in the South Carolina Traffic Collision Fact Book are based on the latest available information at the time that they were compiled. Due to the complex nature of the data, occasionally new information is received after the publication cut-off date. It is therefore possible that some discrepancies may exist between the data published here and other sources.

SOUTH CAROLINA TRAFFIC COLLISION QUICK FACTS 2012

Collision Statistics	2008	2009	2010	2011	2012	% Change 2008 - 2012	% Change 2011 - 2012

*Mileage Death Rate per 100 million vehicle miles of travel.

**Vehicle Miles of Travel in millions of miles.

***Due to a new reporting format, more 'possible injuries' were reported than in previous years.

@Reporting threshold changed midyear to \$1,000 from \$400.

MILEAGE DEATH RATE (FATALITIES PER 100 MILLION VEHICLE MILES TRAVELED) **SOUTH CAROLINA vs. NATIONAL AVERAGE** **25 YEAR TREND 1988-2012**

PRIMARY CONTRIBUTING FACTOR

The 2012 South Carolina Traffic Collision Fact Book reports on the primary contributing factor (see page 132) in a traffic collision. This information comes directly from the collision report form filled out by the investigating officer. It is important to realize that while the report form has a field for primary contributing factor; it can also report up to four (4) other contributing factors for each collision. Thus, we rely on the investigating officer's judgment as to the primary contributing factor for a collision.

Some action (or inaction) by one or more of the drivers was cited as the primary contributing factor in 100,697 of the 108,261 reported traffic collisions in 2012. This accounted for 93.0% of all primary contributing factors, a half a percent more than the previous year of 92.5%. Environmental factors accounted for the next largest category of collision causes with 3,900 or 3.6% of the total. The vast majority of these (3, 474) involved an "Animal in the Roadway," and accounted for 3.2% of all collisions. The "Non-Motorist", "Road" and "Vehicle" categories together accounted for only 3.4% of all reported traffic collisions in 2012.

For fatal collisions in 2012, some type of driver error was considered the primary contributing factor in 686 of the 806 collisions, accounting for 85.1% of all collisions in which someone was killed. This percentage is lower than that of all collisions, which is 93.0%. The specific causes of fatal collisions were quite different from all collisions. The leading primary contributing factor of fatal collisions was "Driving Under the Influence" with 226 collisions (28.0%). A distance second was "Driving Too Fast for Conditions" with 142 collisions (17.6%). The next leading factors were "Failed to Yield Right of Way", "Lying and/or Illegally In Roadway", and "Ran Off Road" with 91, 48, and 39 fatal collisions, respectively. The proportion of "Non-Motorist" causes was much higher in fatal (12.3%) as compared to property damage only collisions (0.3%).

FIRST HARMFUL EVENT

The first harmful event (FHE) in a traffic collision is defined as the first occurrence of injury or damage in a collision. In 2012, the FHE in 84,289 of the 108,261 reported traffic collisions (77.9%) involved some type of collision between a motor vehicle in transport and an object not fixed. The top two FHE's, both involving a collision with an object not fixed, were "Collision with Motor Vehicle in Transport," 59,438 (70.5% of the collisions with an object not fixed) and "Collision with Stopped Vehicle," 18,193 (21.6% of the collisions with an object not fixed). The third top FHE was "Ditch" in the "Collision with Fixed Object" group, with 4,912 collisions (4.5% of all collisions). Combined, these three accounted for 76.2% of all reported collisions.

"Collisions with an Object Not Fixed" accounted for a substantially smaller percentage of the fatal collisions (51.7%) than the property damage only collisions (80.7%). Collisions involving a "Collision with a Fixed Object" accounted for a substantially greater percentage of the fatal collisions (38.5%) than for property damage only (17.1%). The leading FHE in fatal collisions was "Collision with Motor Vehicle in Transport" with 267 (33.1%); the second leading FHE in fatal collisions was "Tree" with 122 (15.1%).

Part II – Collision Characteristics

There are many characteristics associated with traffic collisions. Patterns in these characteristics can provide insight into the cause of collisions and may ultimately lead to effective countermeasures for reducing the number of collisions that occur and minimizing the severity of those that will still occur. The data provided on the following pages may raise interesting questions for those interested in highway safety. These questions may in turn lead to research, which addresses a particular collision characteristic. Here are some examples of traffic collision characteristics for 2012:

A. Driver

- ◆ Male drivers between the ages of 20 and 24 continue to be over represented in fatal collisions. In 2012, male drivers in this age group represented 4.1% of all licensed drivers and 8.6% of drivers involved in fatal collisions.
- ◆ Male drivers made up 72.2% and female drivers made up 23.6% of the drivers involved in fatal collisions (4.2% of drivers' gender was unknown).
- ◆ The leading traffic violation written during a collision investigation in 2012 was "Speeding less than 10 miles over the limit".

B. Time

- ◆ More than 64.3% of fatal collisions occurred between the hours of 3:01 p.m. and 3:00 a.m.
- ◆ The months of May, October, July and December have the most fatal collisions with 83, 82, 76, and 76 respectively.
- ◆ More traffic deaths occurred on Friday, Saturday and Sunday than Monday, Tuesday, Wednesday, and Thursday.
- ◆ The leading Holiday Period for fatalities in 2012 was the Christmas Holiday with 11 fatal collisions and 11 fatalities.

C. Location

- ◆ More fatal collisions (303 or 37.6%) and deaths (320 or 37.1%) occurred on state secondary routes than on any other route category.
- ◆ There were 87 fatal collisions on South Carolina Interstates resulting in 97 persons killed.

D. Environment

- ◆ More than 87.9% of all traffic collisions occurred during clear or cloudy weather conditions.
- ◆ About 84.2% of all collisions occurred on a dry road surface.
- ◆ There were 10 persons killed in work zone collisions in 2012.

E. Vehicles

- ◆ Automobiles made up about 52.9% of all units involved in traffic collisions during 2012.
- ◆ There 1,143 units defined as motor vehicles involved in fatal traffic collisions. Automobiles, pickup trucks, and SUV's made up 76.6% of the motor vehicles involved in fatal crashes.

A. THE DRIVER

Numerous decisions are required of drivers while operating a motor vehicle. All too often, poor judgment, inattention or carelessness on the part of a driver results in a dangerous driving decision, which leads to a traffic collision. The primary contributing factor in 93.0% of all reported traffic crashes was driver-related in 2012. Often, the officer investigating the collision will issue a citation to one or more of the drivers involved. Driver violations charged to drivers involved in traffic collisions reported during 2012 are as follows:

	<u>Violation</u>	<u>Amount</u>	<u>%</u>
1.	Speeding < 10 MPH Over Speed Limit	22,842	31.32%
2.	Failure to Yield Right of Way	12,386	16.98%
3.	Driving Under the Influence	5,350	7.34%
4.	Other Moving Violation	4,012	5.50%
5.	Changing Lanes Unlawfully	3,121	4.28%
6.	Driver's License Violation	2,907	3.99%
7.	Traffic Signal/Sign/Light Violation	2,596	3.56%
8.	Driving Under Suspension	1,780	2.44%
9.	Following Too Closely	1,769	2.43%
10.	Illegal Turning	1,377	1.89%
11.	Other Violations	14,793	20.28%
	Total	72,933	100.00%

Enumerated on the following pages are the numbers of licensed drivers by age and gender and the number of drivers involved in collisions by age and gender. Based on the figures indicated in these tables, nearly one out of every 11 (8.7%) of all SC licensed male drivers between the ages of 15 and 24 years of age was involved in a traffic collision in 2012. About one in 12 (8.3%) of the SC female drivers in the same age group were involved in collisions. For the entire SC licensed population, approximately one out of every 21 (4.7%) SC drivers was involved in a collision during the year. Male drivers accounted for 72.2% of the drivers in fatal crashes.

*Includes drivers whose age and/or gender were not recorded on the report, hit and run vehicles for which driver information was not available and parked vehicles with no driver.

**Property Damage Only

NOTE: These figures only represent drivers of units defined as a motor vehicle.

OUT OF STATE DRIVERS INVOLVED IN TRAFFIC COLLISIONS*

SOUTH CAROLINA DRIVERS TOTALED 164,501

*Figures only represent drivers of any motor vehicle requiring a valid driver's license. There were 13,205 drivers that did not present a valid driver's license at the time of the crash.

DRIVERS INVOLVED IN FATAL COLLISIONS BY ROUTE CATEGORY AND LICENSE STATE

Note: There were 55 drivers involved in fatal collisions on county routes in 2012

B. TIME

The frequency of traffic collisions is affected by the settings of the clock and calendar. The concentration of traffic, for example, is heavier at certain times of the day, days of the week and month. Travel is also affected by holidays and by special events such as football games. In addition to travel, driver attitudes, vision and behavior are influenced by time factors, weather, and time of year. On the following pages, statistics are presented which indicate observable time variables. Some of the important observations in the 2012 data are as follows:

- ◆ More traffic deaths occurred on Friday, Saturday and Sunday (453), than on Monday, Tuesday, Wednesday and Thursday (410).
- ◆ The most frequent time of day for all collision types was 3:01pm -6:00pm. Fatal collisions occurred more frequently during 6:01pm-9:00pm, accounting for 18.5% of the total.
- ◆ More traffic collisions were reported on Friday than any other day of the week with 18,254 collisions during 2012, accounting for 16.9% of the total. No other day of the week experienced more than 16,100 collisions. The fewest traffic collisions were reported on Sundays with 11,316 or 10.5%.
- ◆ As in past years, more fatal collisions were reported on Saturday (163) in 2012 than any other day. This accounted for about 20.2% of all fatal collisions and resulted in the deaths of 171 persons. The fewest number of fatal collisions occurred on Tuesday with 88, resulting in 91 fatalities.
- ◆ May was the leading month for all collisions in 2012, with 9,743. The leading months for fatal collisions were May and October with 83 collisions and 82 fatalities each. February had the fewest fatal collisions with 42 collisions resulting in 44.

C. LOCATION

No area of South Carolina was immune from traffic collisions in 2012. Every county experienced the tragedy of at least one fatal traffic collision during the year. Seven of the state's 46 counties had at least 40 traffic fatalities during 2012 (see page 81 for collisions by county). A variety of factors influence where traffic collisions, injuries and fatalities occur including the volume of traffic on a particular highway, weather variations and travel patterns. Statistics are presented on the following pages, which indicate observable differences in the occurrence of traffic collisions with relation to various location categories. Some important observations in the data are as follows.

- ◆ In 2012, Greenville County had the most total traffic collisions (12,951), the most fatal collisions (66), the most fatalities (68), and the most property damage only collisions (9,939). Charleston County had the most injury collisions (3,423) and non-fatal injuries (4,937).
- ◆ A total of 59,619 collisions were investigated by the South Carolina Highway Patrol. This represents 55.1% of all traffic collisions in South Carolina for 2012. The Highway Patrol investigated an even greater proportion of the fatal crashes 82.6%.
- ◆ In 2012, Secondary and US Primary routes had the most traffic collisions. Respectively, they had 32.5% and 26.5% of the reported total. SC Primary routes were next, accounting for 22.5% of the total collisions.
- ◆ The Secondary routes accounted for the largest percentage (37.6%) of fatal collisions. The 303 fatal collisions that occurred on Secondary routes represent almost three and a half times the number of fatal collisions (87) reported on South Carolina's Interstates.
- ◆ A total of 10,612 collisions occurred on the interstates. This was 9.8% of the total reported traffic collisions for the year.

COLLISIONS INVESTIGATED BY AGENCY TYPE

COLLISIONS BY ROUTE CATEGORY

Route Category	Fatal Collision	Injury Collision	PDO* Collision	Total Collisions	Persons Killed	Persons Injured
Interstate	87	2,401	8,124	10,612	97	3,583
US Primary	182	8,877	19,595	28,654	201	14,345
SC Primary	191	7,546	16,589	24,326	201	11,932
Secondary	303	11,157	23,678	35,138	320	16,961
County	43	2,344	7,144	9,531	44	3,243
TOTALS	806	32,325	75,130	108,261	863	50,064

*Property Damage Only

There were 35,138 traffic collisions reported on Secondary routes during 2012. This was the most for all the route category classifications and accounted for 32.5% of all reported collisions. US Primary routes were second, accounting for 28,654 of the reported collision total. The fewest reported collisions were County routes; a total of 9,531 were reported for these routes.

Secondary routes had the most fatal collisions by a wide margin. The 303 fatal collisions occurring on the Secondary route system accounted for 37.6% of the 806 fatal collisions reported in 2012. On the SC Primary and US Primary routes there were 191 and 182 (respectively) fatal collisions reported for the year. The fewest number of fatal collisions occurred on the County routes with 43 (5.3%).

D. ENVIRONMENT

The environment in which motorists operate their vehicles can contribute to the occurrence of traffic crashes. Environment is defined herein as the combination of external or extrinsic physical conditions that affect and influence the operation of a motor vehicle. These include road surface, weather, light conditions, traffic control, road character, trafficway, junction type, and work zone type for each driver.

One or more of the environmental factors can be the primary factor of a collision or may be a contributing factor in a given crash. Weather, light, and surface conditions are substantially beyond the control of engineering or law enforcement efforts. Changes in traffic controls, road character, trafficway, junction type, and work zone type factors can all be effected by traffic engineering efforts.

As reflected in the statistics on the next two pages, most collisions occur under favorable environmental conditions: dry roadway (84.2%); clear weather (79.9%); daylight (70.5%); no traffic control device (59.4%); and straight-level road (79.9%).

The percentages of fatal collisions occurring under the most favorable environmental conditions are as follows: dry roadway (86.6%); clear weather (82.4%); daylight (45.0%); no traffic control (72.2%); and straight-level roadway (64.0%).

Environmental factors were the primary contributing factor in only 3.6% of all collisions in 2012. The environment may have been a contributing factor to collisions where it was not the primary contributing factor. Efforts to improve those environmental factors which can be controlled (especially traffic control and road character) should help to reduce the frequency of traffic crashes in South Carolina.

E. UNITS

The consequences of traffic collisions are affected by the types of 'units' that are involved. A collision between a relatively large unit, such as a truck or train, and a smaller unit, such as a motorcycle, transmits a substantially greater force to the smaller vehicle, and hence to its occupants or riders, than a collision between two vehicles of comparable size. This irrefutable law of physics probably accounts for the over representation of certain 'unit types' in traffic collisions. Some of the key findings in the 2012 data are as follows:

- ◆ The most common unit involved in traffic crashes in 2012 was the automobile. Out of 200,779 units involved in traffic collisions during the year, 106,212 were automobiles. This represents 52.9% of the total units.
- ◆ For fatal collisions, a much smaller percentage of units involved were automobiles. Of the 1,332 units involved in fatal collisions, 458 or 34.4% were automobiles.
- ◆ There were 125 pedestrians killed in 2012. This represents 11.6% of all pedestrians involved in traffic crashes during the year.
- ◆ There were 107 fatal crashes involving motorcycles resulting in 109 fatalities.
- ◆ A total of 65 fatal crashes involving truck tractors resulted in 69 deaths in 2012.

A motor vehicle traffic collision is defined as one in which: (1) the unstable situation originates on a trafficway or (2) a harmful event occurs on a trafficway. Using the above definition, each of the unit types listed above was involved in a collision which involved at least one motor vehicle. Units considered as motor vehicles are Automobile, Pickup Truck, Truck Tractor, Other Truck, Full Size Van, Minivan, SUV, Motorcycle, School Bus, Passenger Bus, and Unknown (Hit and Run Only). Units in the Other category may or may not be a motor vehicle, depending on the means by which they were propelled. For units not considered motor vehicles, the collision included at least one other unit which was a motor vehicle.

By far the most frequent action prior to impact for units involved in traffic collisions in 2012 was 'Movement Essentially Straight Ahead', with 53.4% of the total units. The next action 'Slowing Or Stopped In Traffic' in traffic accounted for 20.8% of the units. The third, fourth, and fifth actions involved units which were 'Turning Left' (8.8%) followed by 'Changing Lanes' (3.4%) and 'Entering Traffic Lane' (3.4%). Combined, the top five categories accounted for 89.7% of all units involved in traffic collisions.

*Includes all fatalities (not just motorcyclists) in motorcycle collisions.

**Based on 10,000 motorcycle registrations

***Based on 100 motorcycle registrations

@1973-Lights On Law effective July 1.

^1975-Implemented Classified License Law for motorcycles

+1980-Helmet and Goggles Law amended effective June 16, exempting cyclists 21 and older.

#2004-Registrations include 2-wheel and 3-wheel motorcycles.

Part III – Collision Consequences

The consequences of traffic collisions extend beyond those persons directly affected and are measured in both human and economic terms. The economic costs consider that portion of financial loss borne by society (i.e. medical costs), property damage, lost productivity, etc. Opposite the economic losses are the intangible human costs associated with the grief and suffering that accompanies a traffic death or injury. On the following pages, statistics related to estimated economic cost, traffic injuries, fatalities and restraint usage are presented. Some important observations in the 2012 data are as follows:

- ◆ Economic loss increased by 5.7% in 2012.
- ◆ Males accounted for 73.5% of the traffic fatalities in 2012, down from 76.7% in 2011.
- ◆ There were 229 females who died in traffic collisions in 2012 and 634 males.
- ◆ A total of 202 persons under the age of 25 were killed in traffic collisions, accounting for 23.4% of the total persons killed.
- ◆ Of the 539 occupant fatalities with known restraint usage, 319 (59.2%) were not restrained, and 220 (40.8%) were restrained.
- ◆ There were 543 automobile, truck and van occupants totally ejected from the vehicles in which they were riding. Of these, 123 (22.7%) were killed. Of the 261,227 occupants not ejected, 410 (0.2%) were killed. The percentage of fatalities suffered by ejected occupants was more than 100 times that of occupants not ejected.
- ◆ In 2012, there were 9,186 children under the age of six who were occupants of a car or truck that was involved in a traffic collision. Of these, 6,794 were restrained by a child safety seat, 2,070 by some other restraint (seat belt, seat/lap combination), 203 were unrestrained and for 119 restraint usage was unknown.
- ◆ 18.6% of those occupants not wearing a seat belt at the time of collision were severely injured or killed. This compares to less than 1.0% for those wearing a seat belt.

Traffic Fatalities by Seating Location Motor Vehicle Occupants Only

Fatality Restraint Usage By Seating Location

Part IV – Driving Under the Influence

Alcohol and/or drug related traffic collisions are responsible for a large portion of reported traffic collisions each year. The percentage of collisions that involve alcohol or drugs increases as the severity of injuries increases. On the following pages collision statistics are presented which are based on contributing factors in the collision, as determined by the investigating officers. **Statistics listed in this section ARE NOT comparable to any statistics published prior to this publication.**

The data presented in this section come from two different sources for Fatal and Non-fatal collisions:

1) Fatal Collision Data:

The National Highway Traffic Safety Administration (NHTSA) uses a method called 'multiple imputation' when fatal collisions are lacking blood alcohol concentration (BAC) values on drivers involved in fatal collisions. This method uses various aspects a fatal collision in order to provide estimates of alcohol involvement and BAC levels. NHTSA's data does not include driving under the influence of drugs.

2) Non-fatal Collision Data:

The data presented for non-fatal collisions comes from the information collected from the Uniform Traffic Collision Report Form (TR-310 – shown on pages 129 and 130) filled out by the investigating officer. The South Carolina DUI data includes being under the influence of alcohol and/or drugs.

In South Carolina, it is inferred that you are under the influence when your Blood Alcohol Concentration (BAC) reaches a level of 0.08 (as of July 2003). At this level, you are seven times more likely to have a traffic collision than if your BAC is zero. If your BAC reaches 0.15 percent, your chances of having a traffic collision are 25 times greater. Some of the common effects of alcohol at various BAC levels are as follows:

Blood Alcohol Concentration	Changes in Feelings and Personality	Physical and Mental Impairments
0.01 – 0.06	Relaxation Sense of Well-being Loss of Inhibition Lowered Alertness Joyous	Thought Judgment Coordination Concentration
0.06 – 0.10	Blunted Feelings Disinhibition Extroversion Impaired Sexual Pleasure	Reflexes Impaired Reasoning Depth Perception Distance Acuity Peripheral Vision Glare Recovery
0.11 – 0.20	Over-Expression Emotional Swings Angry or Sad Boisterous	Reaction Time Gross Motor Control Staggering Slurred Speech
0.21 – 0.29	Stupor Lose Understanding Impaired Sensations	Severe Motor Impairment Loss of Consciousness Memory Blackout
0.30 – 0.39	Severe Depression Unconsciousness Death Possible	Bladder Function Breathing Heart Rate
=> 0.40	Unconsciousness Death	Breathing Heart Rate

DEFINITIONS – FOR THE PURPOSE OF THIS PUBLICATION

DUI – Driving under the influence of alcohol and/or drugs.

DUI.08+ - Driving with a BAC of .08 or more.

ALCOHOL IMPAIRED DRIVING FATALITY– A Fatality that occurs in a motor vehicle traffic crash that involves at least one driver or a motorcycle rider (operator) with a BAC of .08 or above.

Part V – Counties

South Carolina is comprised of 46 counties, each with its own unique set of demographic, geographic, and political characteristics. These and other factors influence events within a county's borders. Using this information, planners can tailor specific countermeasures to the unique situation of a given county. Crime, economic activity, accidents and the subject of this book (traffic collisions) are all affected by these characteristics. On the following pages, a summary of each county's traffic collision characteristics is provided. Among other facts, this data shows the following for 2012:

- ◆ Greenville County had the most traffic collisions with 12,951. This total was nearly 900 more than the number two county Charleston with 12,057 and over 1,300 more than the third highest county, Richland with 10,721 collisions.
- ◆ Greenville County had the most fatal collisions with 66 reported during the year, followed by Horry with 51 and Spartanburg with 48. Greenville and Horry counties had the most fatalities as well, Greenville with 68 and Horry with 52. Richland followed these two with 51.
- ◆ Charleston County had the most injury collisions and persons injured, with 3,423 and 4,937, respectively, in 2012. Richland County was next with 2,963 injury crashes and 4,687 injuries. Greenville County was third for injury collisions and injuries with 2,946 injury collisions and 4,323 injuries.
- ◆ The high number of collisions in Greenville, Charleston, and Richland Counties is largely a result of large populations and larger amounts of travel within these counties.
- ◆ The counties with the highest number of fatalities per 100 million vehicle miles of travel (VMT) were Williamsburg, Saluda, and Oconee with 3.577, 3.516, and 3.404 VMT fatality rates. For South Carolina, the overall VMT fatality rate was 1.765.

DEFINITIONS

Blood Alcohol Concentration (BAC) - The percentage of a blood sample that is alcohol; e.g., a BAC of .10 is a sample of blood with 1 part alcohol for every 999 parts blood.

Bus - A motor vehicle designed to transport sixteen (16) or more persons, including the driver.

Collision - Throughout this publication the terms collision and traffic collision are equivalent to the term motor vehicle traffic collision as defined below.

Driver - An occupant who is in actual physical control of a transport vehicle, or for an out-of-control vehicle, an occupant who was in control until control was lost.

Driver Intention - What the driver intended to do just prior to the first harmful event and before executing an evasive maneuver.

Economic Loss -Based on the 2012 National Safety Council Formula which applies with the following factors:

Each fatality	\$1,410,000
Each incapacitating injury.....	\$72,700
Each non-incapacitating injury.....	\$23,400
Each possible injury.....	\$13,200
Each *PDO collision.....	\$8,900

*Property Damage Only

Fatal Traffic Collision - Any traffic collision that results in the death of at least one occupant or pedestrian as a direct result of injuries sustained in the collision within 30 days of the collision date.

First Harmful Event - The first event in a traffic collision to result in injury or property damage.

Harmful Event Location - The place, on or off the roadway, where the first injury or property damage occurred. This describes the location of the first harmful event as it relates to its position within or outside the trafficway.

Incapacitating Injury - Any injury, other than a fatal injury, which prevents the injured person from walking, driving or normally continuing the activities he was capable of performing before the injury occurred.

Junction - Either an intersection or the connection between a driveway access and a roadway other than a driveway access.

Manner of Collision - The identification in a crash of how the motor vehicle(s) initially came together in a traffic collision.

Motor Vehicle - Any motorized (mechanically or electrically powered) road vehicle not operated on rails, excluding mopeds, minibikes and other vehicles not subject to motor vehicle licensing regulations. These include: automobiles, trucks, buses, vans and motorcycles.

Most Harmful Event - The event for an *individual unit* involved in a traffic collision that results in the most severe injury or property damage.

Motor Vehicle Traffic Collision - A transport collision that involves at least one (1) motor vehicle in transport, in which the unstabilized situation originates on a trafficway or at least one harmful event occurs on a trafficway. This definition excludes any collision on a private way.

Non-Incapacitating Injury - Any injury, other than a fatal injury or incapacitating injury, which is evident to observers at the scene of the collision in which the injury occurred.

Nonjunction - Anything that is not an intersection or the connection between a driveway access and a roadway other than a driveway access.

Occupant - Any person who is part of a transport vehicle (automobile, bicycle, etc.)

DEFINITIONS

Passenger - Any occupant of a vehicle other than its driver.

PDO - An abbreviation for property damage only. A PDO collision is one with some property damage but no injuries or fatalities.

Pedalcycle - A non-motorized vehicle propelled by pedaling (bicycle, tricycle, etc.). Note: The pedalcycle pages include all types but mostly bicycles.

Pedestrian - Any person who is not an occupant as defined above. Includes persons on foot, roller skates, and skateboards.

Possible Injury - Any injury that is reported or claimed which is not a fatal injury, incapacitating injury or non-incapacitating injury.

Primary Contributing Factor - Refers to the primary reason for the traffic collision. This is the presumptive factor that created the collision situation.

Private Way (Private Property) - Any land other than a trafficway. This includes parking lots even if they are designed for public use. Collisions on private ways are not included in this publication.

Road - The part of a trafficway which includes both the roadway and any shoulder alongside the roadway.

Rural Area - Any area which is not within a defined urban area.

Traffic Collision - Used in this publication interchangeably with Motor Vehicle Traffic Collision.

Traffic Unit (Unit) - Any motorized road vehicle (includes vehicles that do and do not qualify as motor vehicles in the above definition), pedestrians, animal drawn vehicle and animals with human riders.

Trafficway - Any land way open to the public as a matter of right or custom for moving persons or property from one place to another.

Truck Tractor - A motorized vehicle consisting of a single motorized transport device designed primarily for drawing.

Unit - Used interchangeably with traffic unit (see definition above).

Urban Area - An area composed of an incorporated place of at least 5,000 population along with the surrounding densely settled areas.

ACKNOWLEDGEMENTS

The Office of Highway Safety and Justice Programs of the South Carolina Department of Public Safety would like to take the opportunity to express our sincere appreciation to all persons, agencies, departments and organizations who have contributed to this publication.

The vast majority of data used to produce this publication was tabulated from the Uniform Traffic Collision Report for Investigating Officers. These reports were submitted by members of the South Carolina Highway Patrol, City Police Departments and various other Law Enforcement Agencies.

The Office of Highway Safety and Justice Programs gives special recognition to the above traffic investigative agencies and, in doing so, cannot forget the support and cooperation of other agencies and organizations.

The Office of Highway Safety and Justice Programs, which tabulated the traffic collision data and other pertinent information for this publication, could not have done so without the untiring efforts of the above persons and organizations.
